

Keane OpenNotes Fellowship

The **Keane OpenNotes Fellowship in Patient Engagement and Transparency** is a two-year research fellowship sponsored by OpenNotes (www.opennotes.org), the international movement focusing on transparency in health care. Based in the research section of the nationally recognized Division of General Medicine at Beth Israel Deaconess Medical Center (BIDMC), the Keane Fellow will work closely with Harvard Medical School (HMS) faculty. Areas of interest might include research in fostering improved patient and family engagement, patient-clinician communication, shared decision-making, patient safety, disparities in access to pertinent clinical data, and ethical considerations pertaining to data sharing.

This inaugural program, which is not ACGME certified, welcomes applicants with doctoral degrees in a broad range of disciplines, both clinical (physicians in all specialties, nurses, others) and non-clinical (social scientists, health policy researchers, informaticists). To ensure that the Fellow meets clearly defined goals, this extraordinary opportunity will provide individualized support, mentorship, and skill development requisite for successful careers in academic medicine and/or affiliated health sciences.

The program offers candidates the opportunity to participate in the Summer Program in Clinical Effectiveness or/ and a Master in Public Health degree at the Harvard T. H. Chan School of Public Health. For Fellows who are practicing physicians, a clinical session during the week may be accommodated.
